

# WHAT TO KNOW ABOUT

# SLEEP

## *How much sleep do I need?*

Most adults need between 6 and 10 hours of sleep per night. Aiming for 7-8 is a good place to start, adjusting as-needed.

## *Better sleep can:*

- boost the immune system and support physical health.
- contribute to a more positive mood and better mental health.
- improve memory, concentration, and academic performance.

## *Did you know?*

7 out of 10 college students say they get less than the recommended amount of sleep every night.

## *DOs for Better Sleep*

- DO go to bed and get up around the same times every day.
- DO exercise regularly. (Avoid exercise for several hours before bedtime.)
- DO set aside time to write down anything worrying you earlier in the evening. When it's time for bed, remind yourself that you've already done your worrying for the night.
- DO establish a relaxing bedtime routine that works for you. (Take a relaxing shower, read a comforting book, etc.)
- DO set the stage for sleep: consider the temperature, light, and sound in the room. Try turning your clock away from you.
- DO try relaxation exercises. (Use the apps on the next page!)
- DO get up if you're not asleep in 30 minutes. Do something relaxing until you feel sleepy, then try again.

## *DON'Ts for Better Sleep*

- DON'T take long naps during the day. This can make sleeping at night more difficult and keep the cycle of poor sleep going.
- DON'T drink caffeinated beverages (including tea, coffee, energy drinks, etc.), especially after 6pm.
- DON'T eat a heavy meal less than 3 hours before bed.
- DON'T use devices with bright screens (phone, laptop, tv, etc.) within the hour before bed.
- DON'T use your bed for things other than sleeping (studying, socializing, eating, etc.)
